

COVID-19 NOTICE

Dear Patients,

The world health community continues to monitor and respond to the outbreak of COVID-19. Global efforts at this time are focused concurrently on lessening the spread and impact of this virus. We are taking proactive steps to address these concerns and limit your exposure.

Before coming in: The overall objective is to limit exposure. We are urging all patients to call our office prior to their appointment if they have any reason to suspect that they have either been exposed to the Coronavirus or if they believe they have symptoms (fever, difficulty breathing, and/or coughing) that could be the Coronavirus.

Visitor Restrictions. Please know that visitor restrictions are in effect now. We ask that only one primary caregiver, such as a parent, spouse, significant other or other designated caregiver accompany you to your appointment. Please refrain from bringing children under the age of 17. Please be advised our staff may screen you and your caregiver with questions about your current health, symptoms, recent travel or exposure to persons with COVID-19.

We understand these visitor restrictions may be difficult for you. While we are committed to providing a family-centered care environment, right now restricting visitors is in the best interest of our patients and staff.

What are the symptoms of the coronavirus?

According to the CDC they are fever, cough and shortness of breath. Emergency warning signs are difficulty breathing, persistent pain or pressure in the chest, new confusion or inability to arouse and bluish lips or face. The symptoms appear 2-14 days after exposure.
